What sources I used

I used:

- The “*International Personality Item Pool (IPIP)*” based on the OCEAN model to help with the process of working out one's behaviors

ipip_3320_items.xlsx

<https://ipip.ori.org/AlphabeticalItemList.htm>

- The 100 HEXACO-PI-R items

<https://hexaco.org/hexaco-inventory>

- The 25-item DS-R

<https://pages.stern.nyu.edu/~jhaidt/disgustscale.html>

- The 21-item ERS

https://projects.iq.harvard.edu/files/nocklab/files/emotion_reactivity_scale_2008_measure.doc

- The Schwartz theory of basic values
- Maslow's hierarchy of needs
- Findings on the associations between life domains and people's QoL
- Role theory
 - Was a challenge to find some of the labels that I was looking for. Some nouns aren't commonly used or are non-existent. It's, for example, rare for people to use labels like “*ultracrepidarian*” or “*sciolist*”. For non-existent ones, need “<verb> person”
